

Product Name: [10x PAGE-gel transfer buffer](#)

Cat. #: T5016

Store at RT Ship at RT Shelf Life: **12 months**

Size: Supplied as a 10X solution, 1000 ml

Description:

Tris-Glycine Transfer Buffer (10X) is specially optimized for western blot transfer applications using Tris-Glycine gels. The transfer buffer can be reused at least five times and maintain a similar extent of protein transfer to PVDF membrane. Repeated use of the transfer buffer containing methanol will significantly reduce the volume of hazardous waste generated and its disposal cost as well as its adverse effect on the environment. This product is for in vitro research use only.

Components in 1x Formulation: 192mM Glycine, 25mM Tris, 20% Methanol, Supplied at pH 8.3.

Direction for use:

Dilute transfer buffer (10x) to a 1000mL 1x solution by add 100mL 10x Transfer buffer, 700mL ddH2O and 200mL Methanol. This product supplies enough material to make 10 liters of 1x solution.
